

Dashboard of distribution - Pokemons introduced

Total Pokemons introduced: 1190

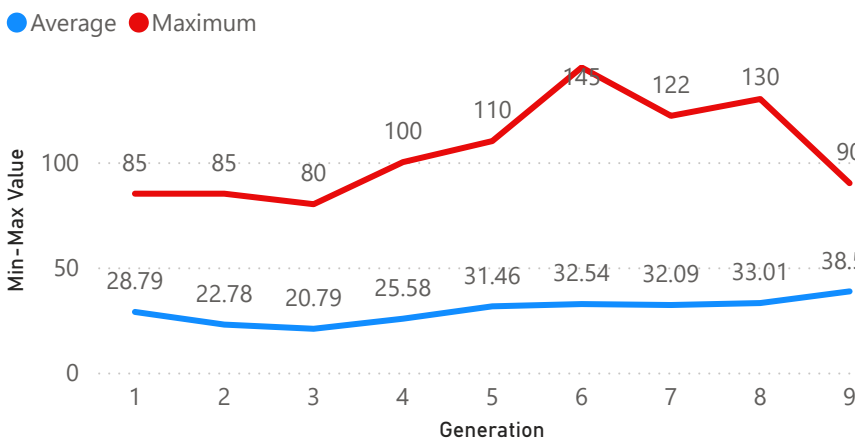

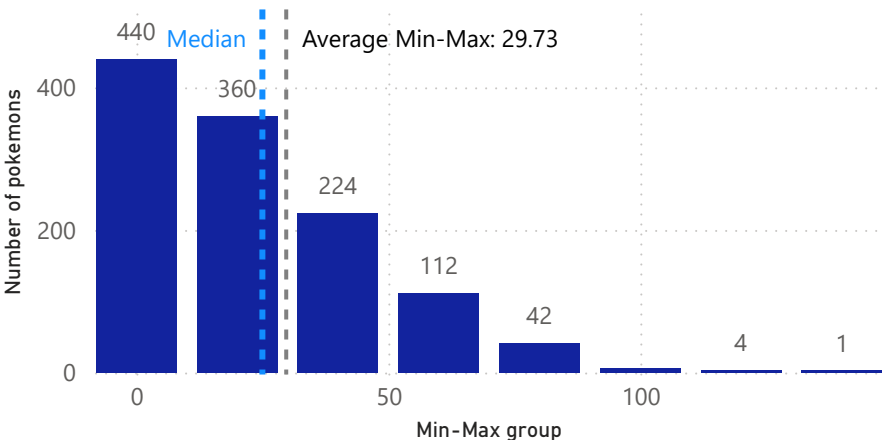

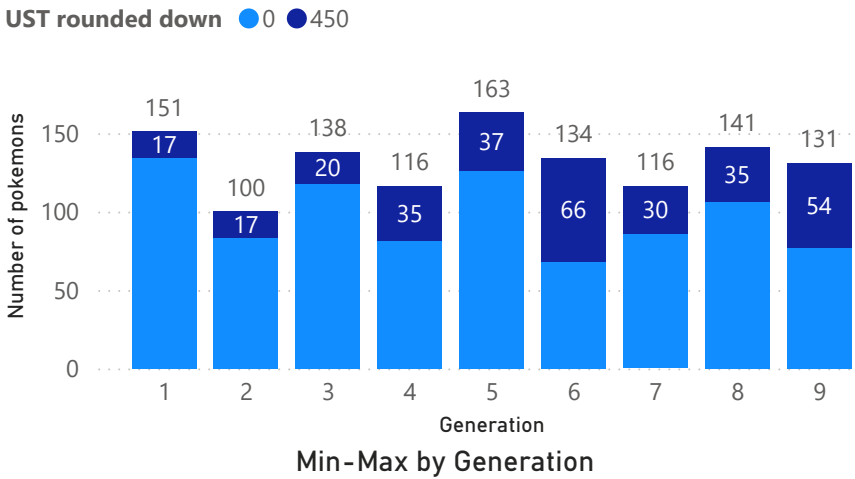

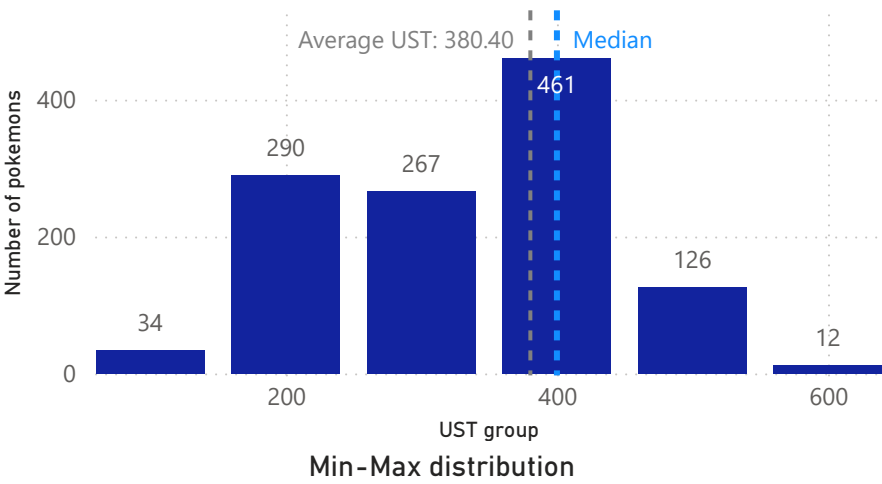

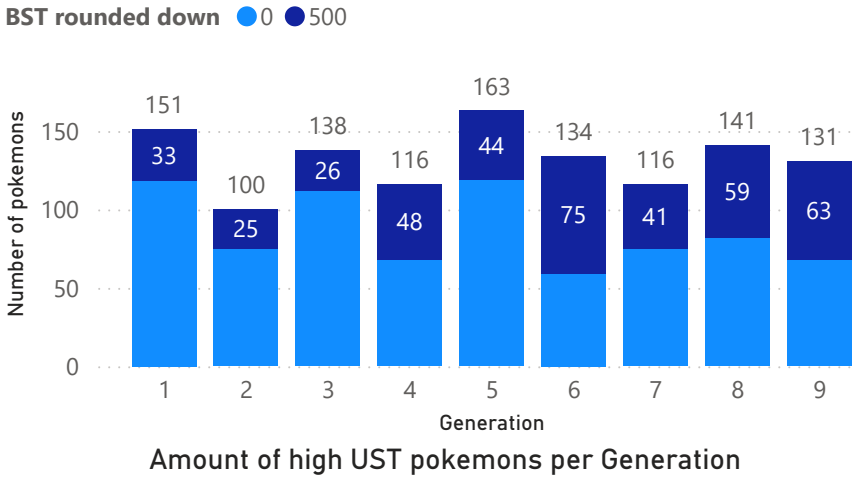

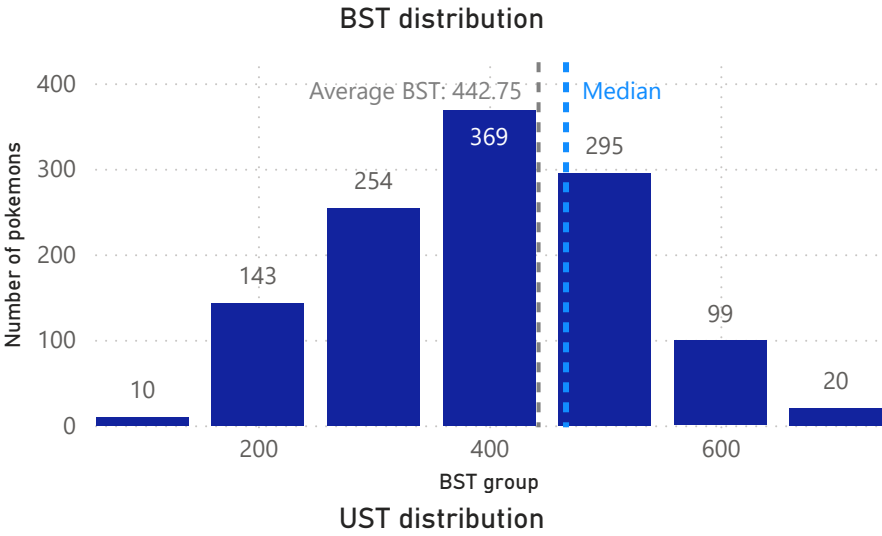

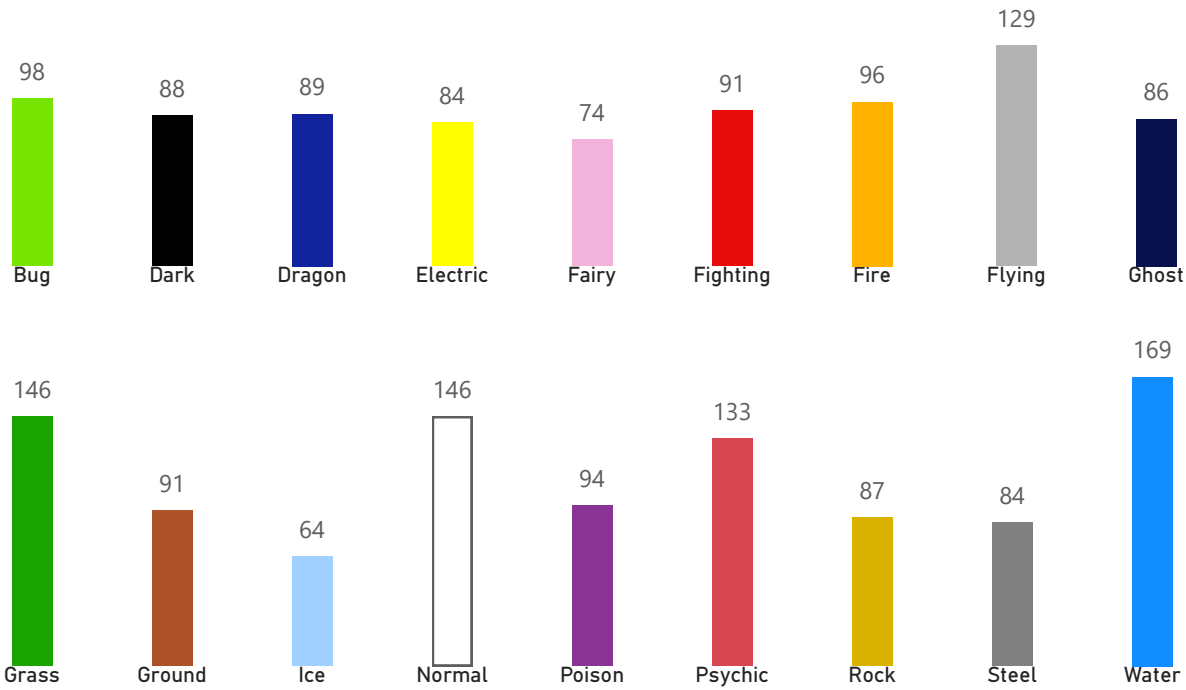

This dashboard is here to show you the distribution of Pokemons introduced per Generation, Category, Type and more. An important goal of the dashboard is to show the power creep in Pokemon. For that, some important factors are calculated:

**BST = Base Stats Total = The sum of all stats of a pokemon.**  
**UST = Usable Stats Total** = Because in general, pokemons use their high attacking stats, the lower is substracted from the BST, to give a better factor of the actual stats total of a pokemon.  
**Min-Max** = The difference between both attacking stats.

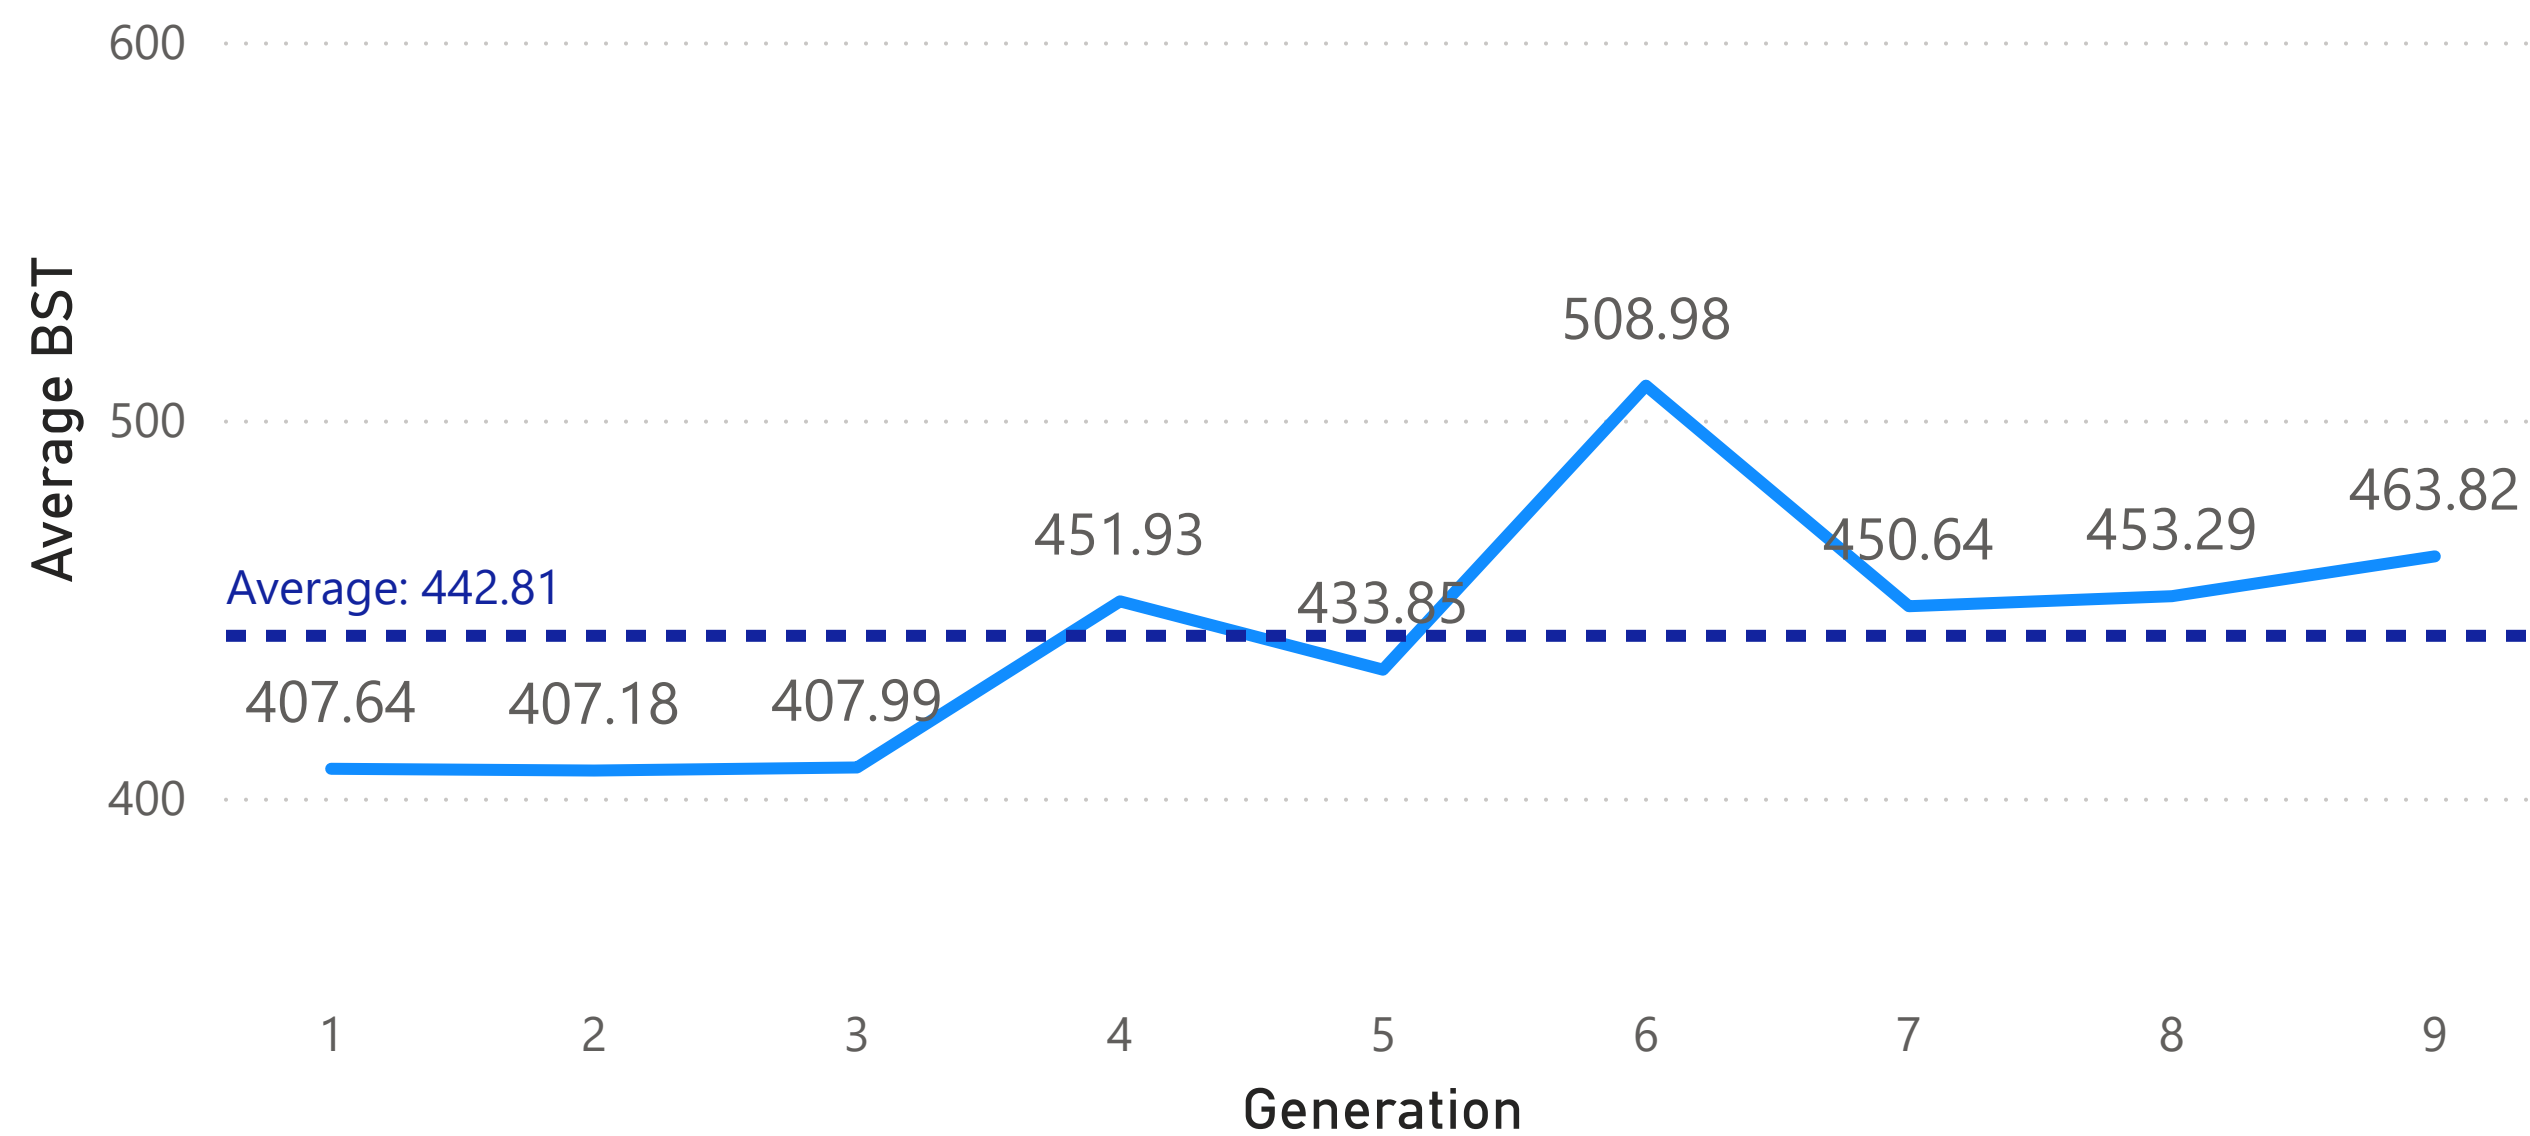

Average BST: 442.75

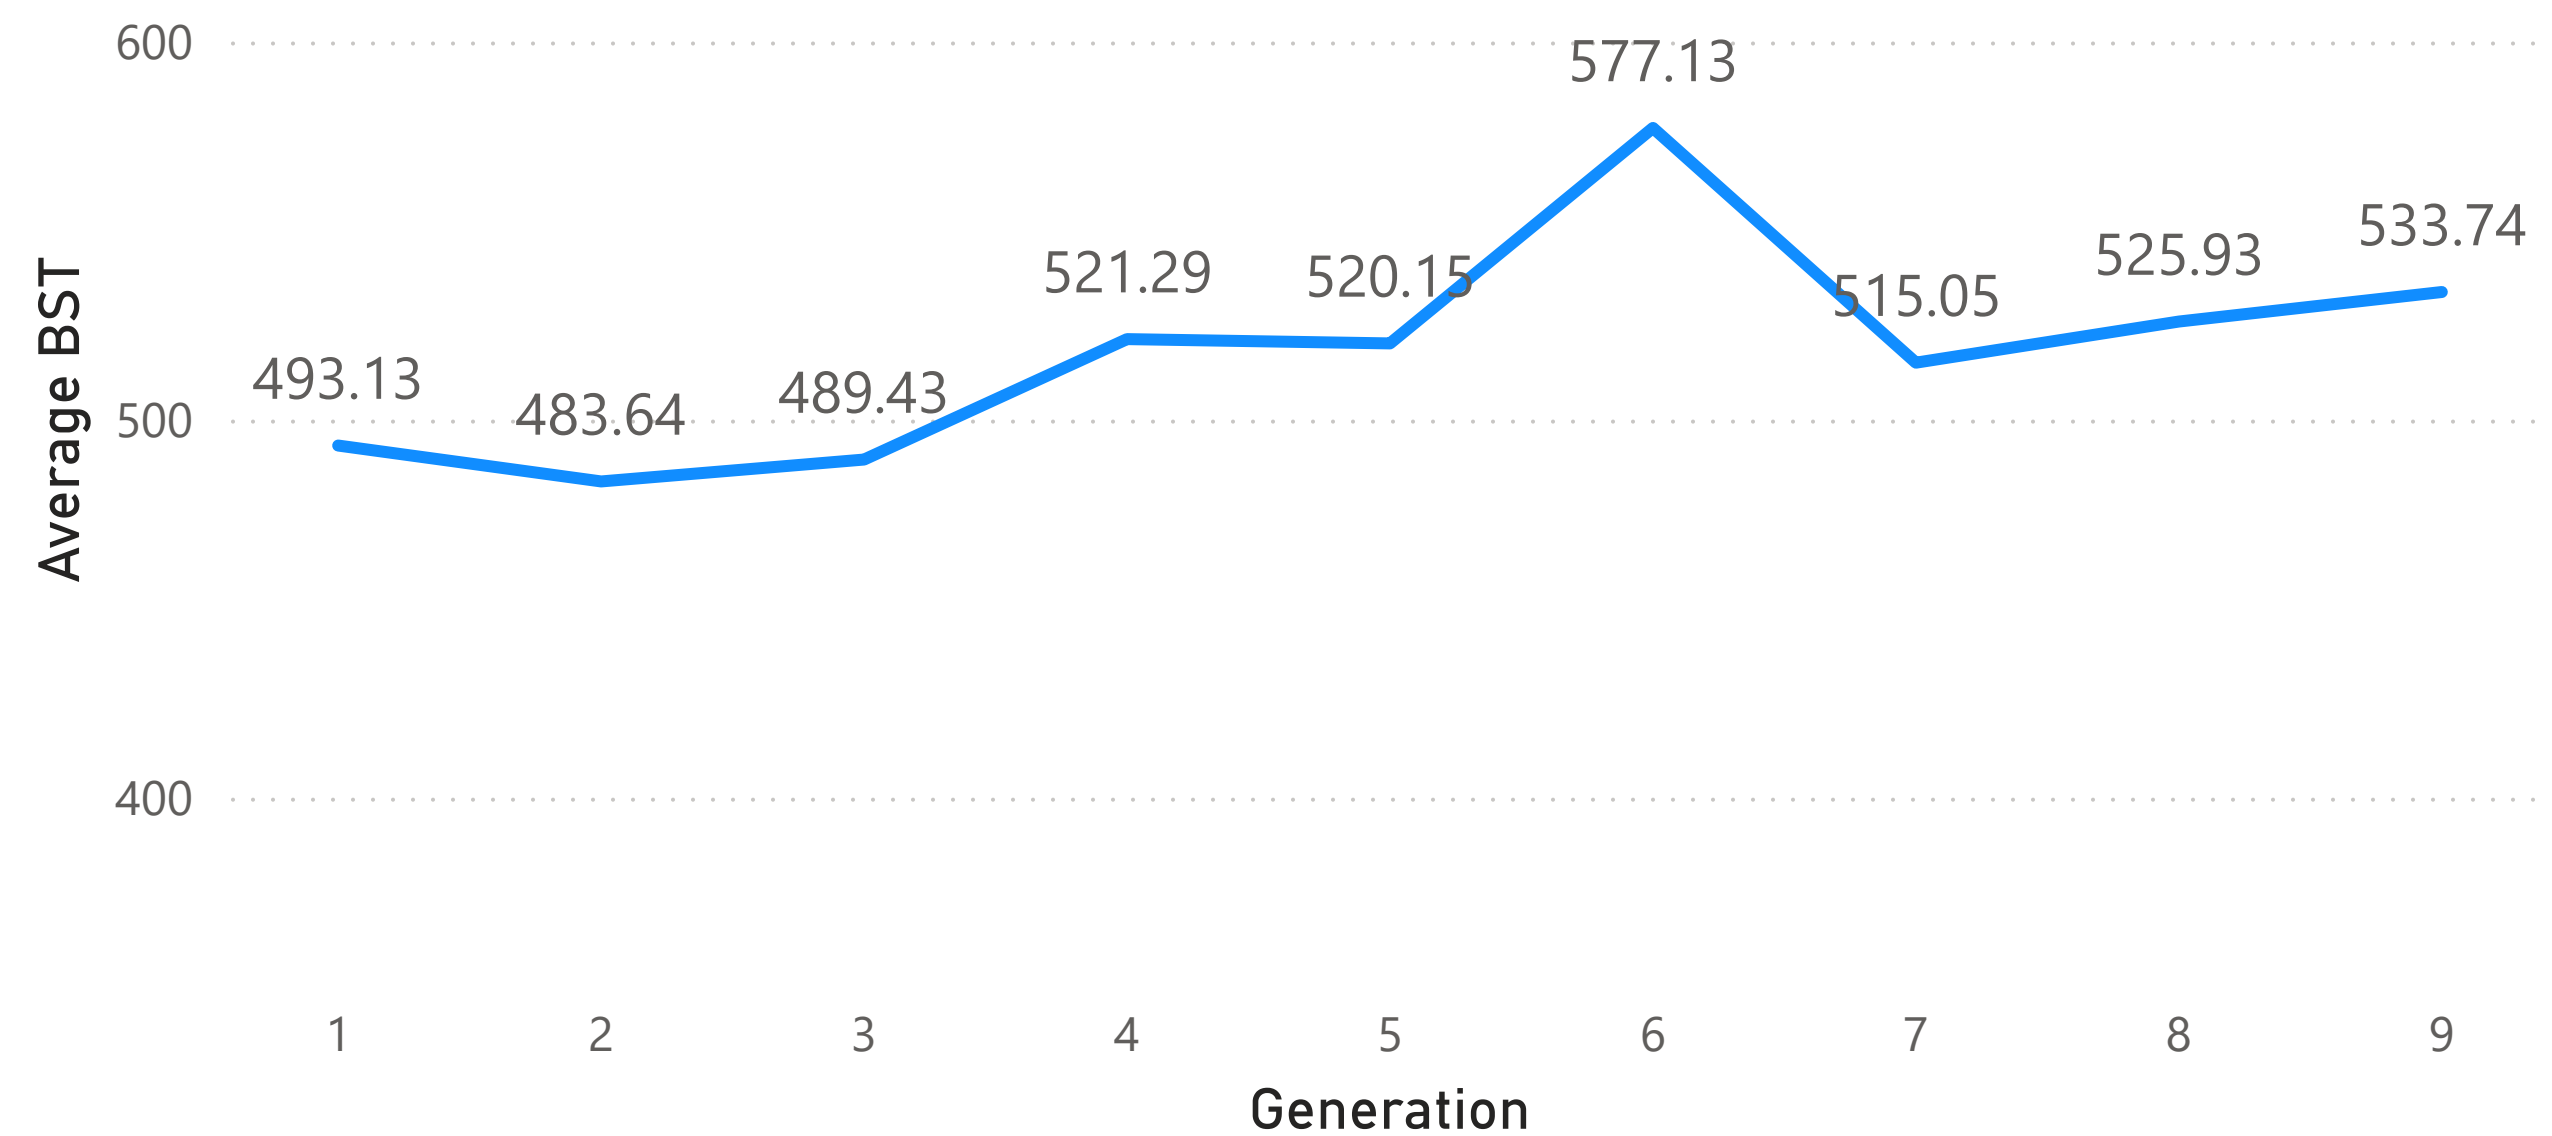

Pokemons introduced by Type

Average BST by Generation

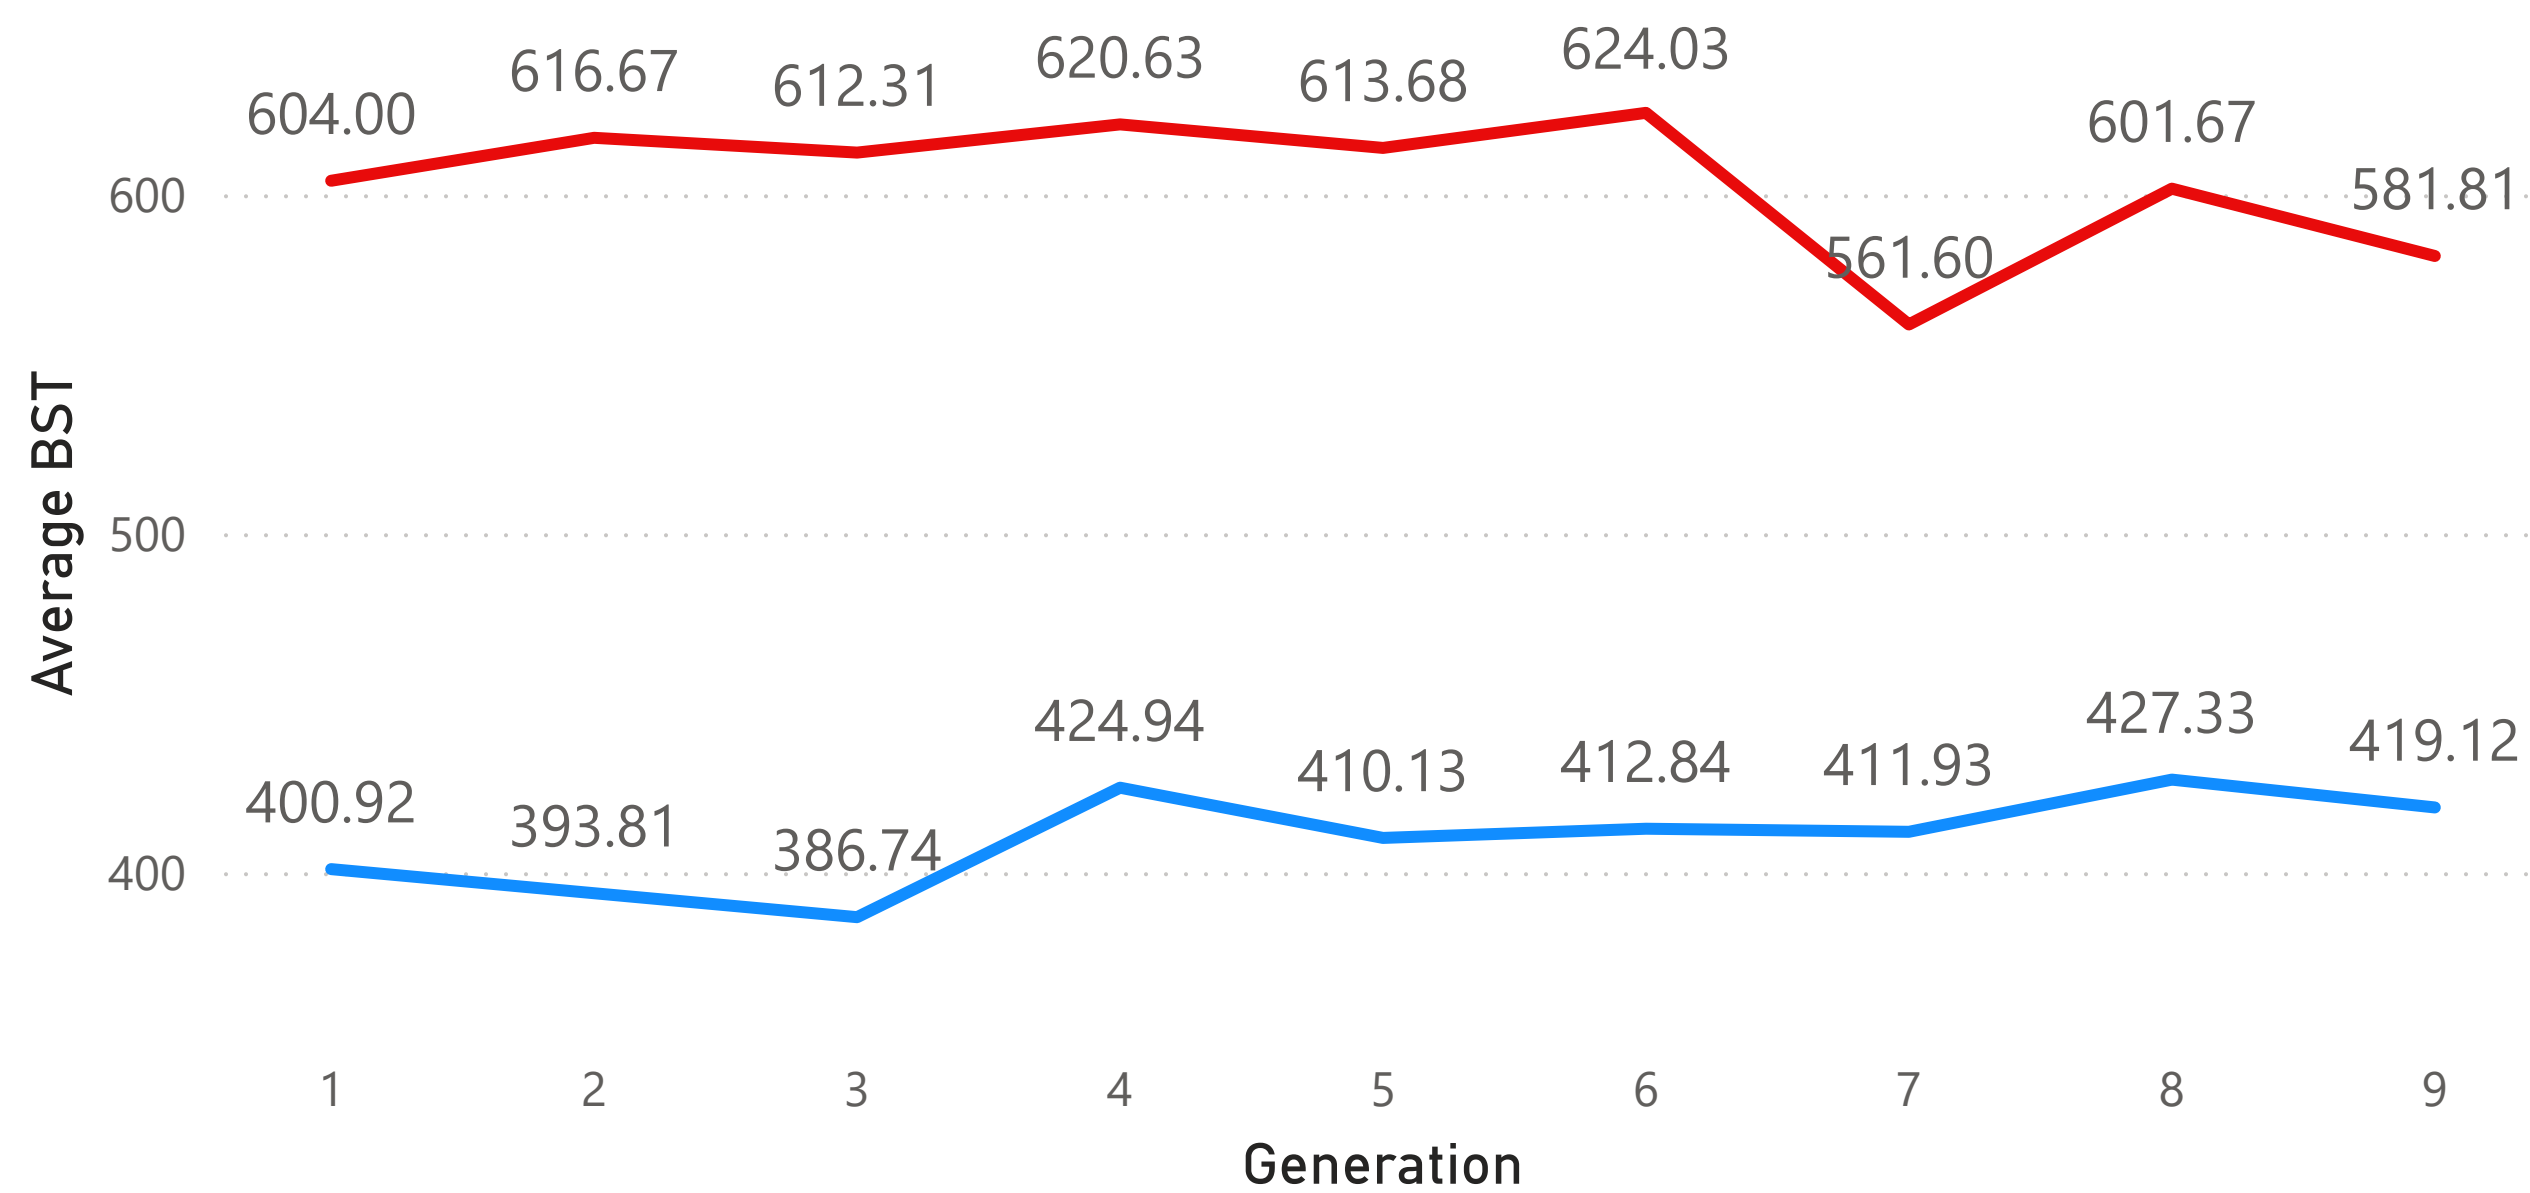

Average BST - fully evolved pokemons

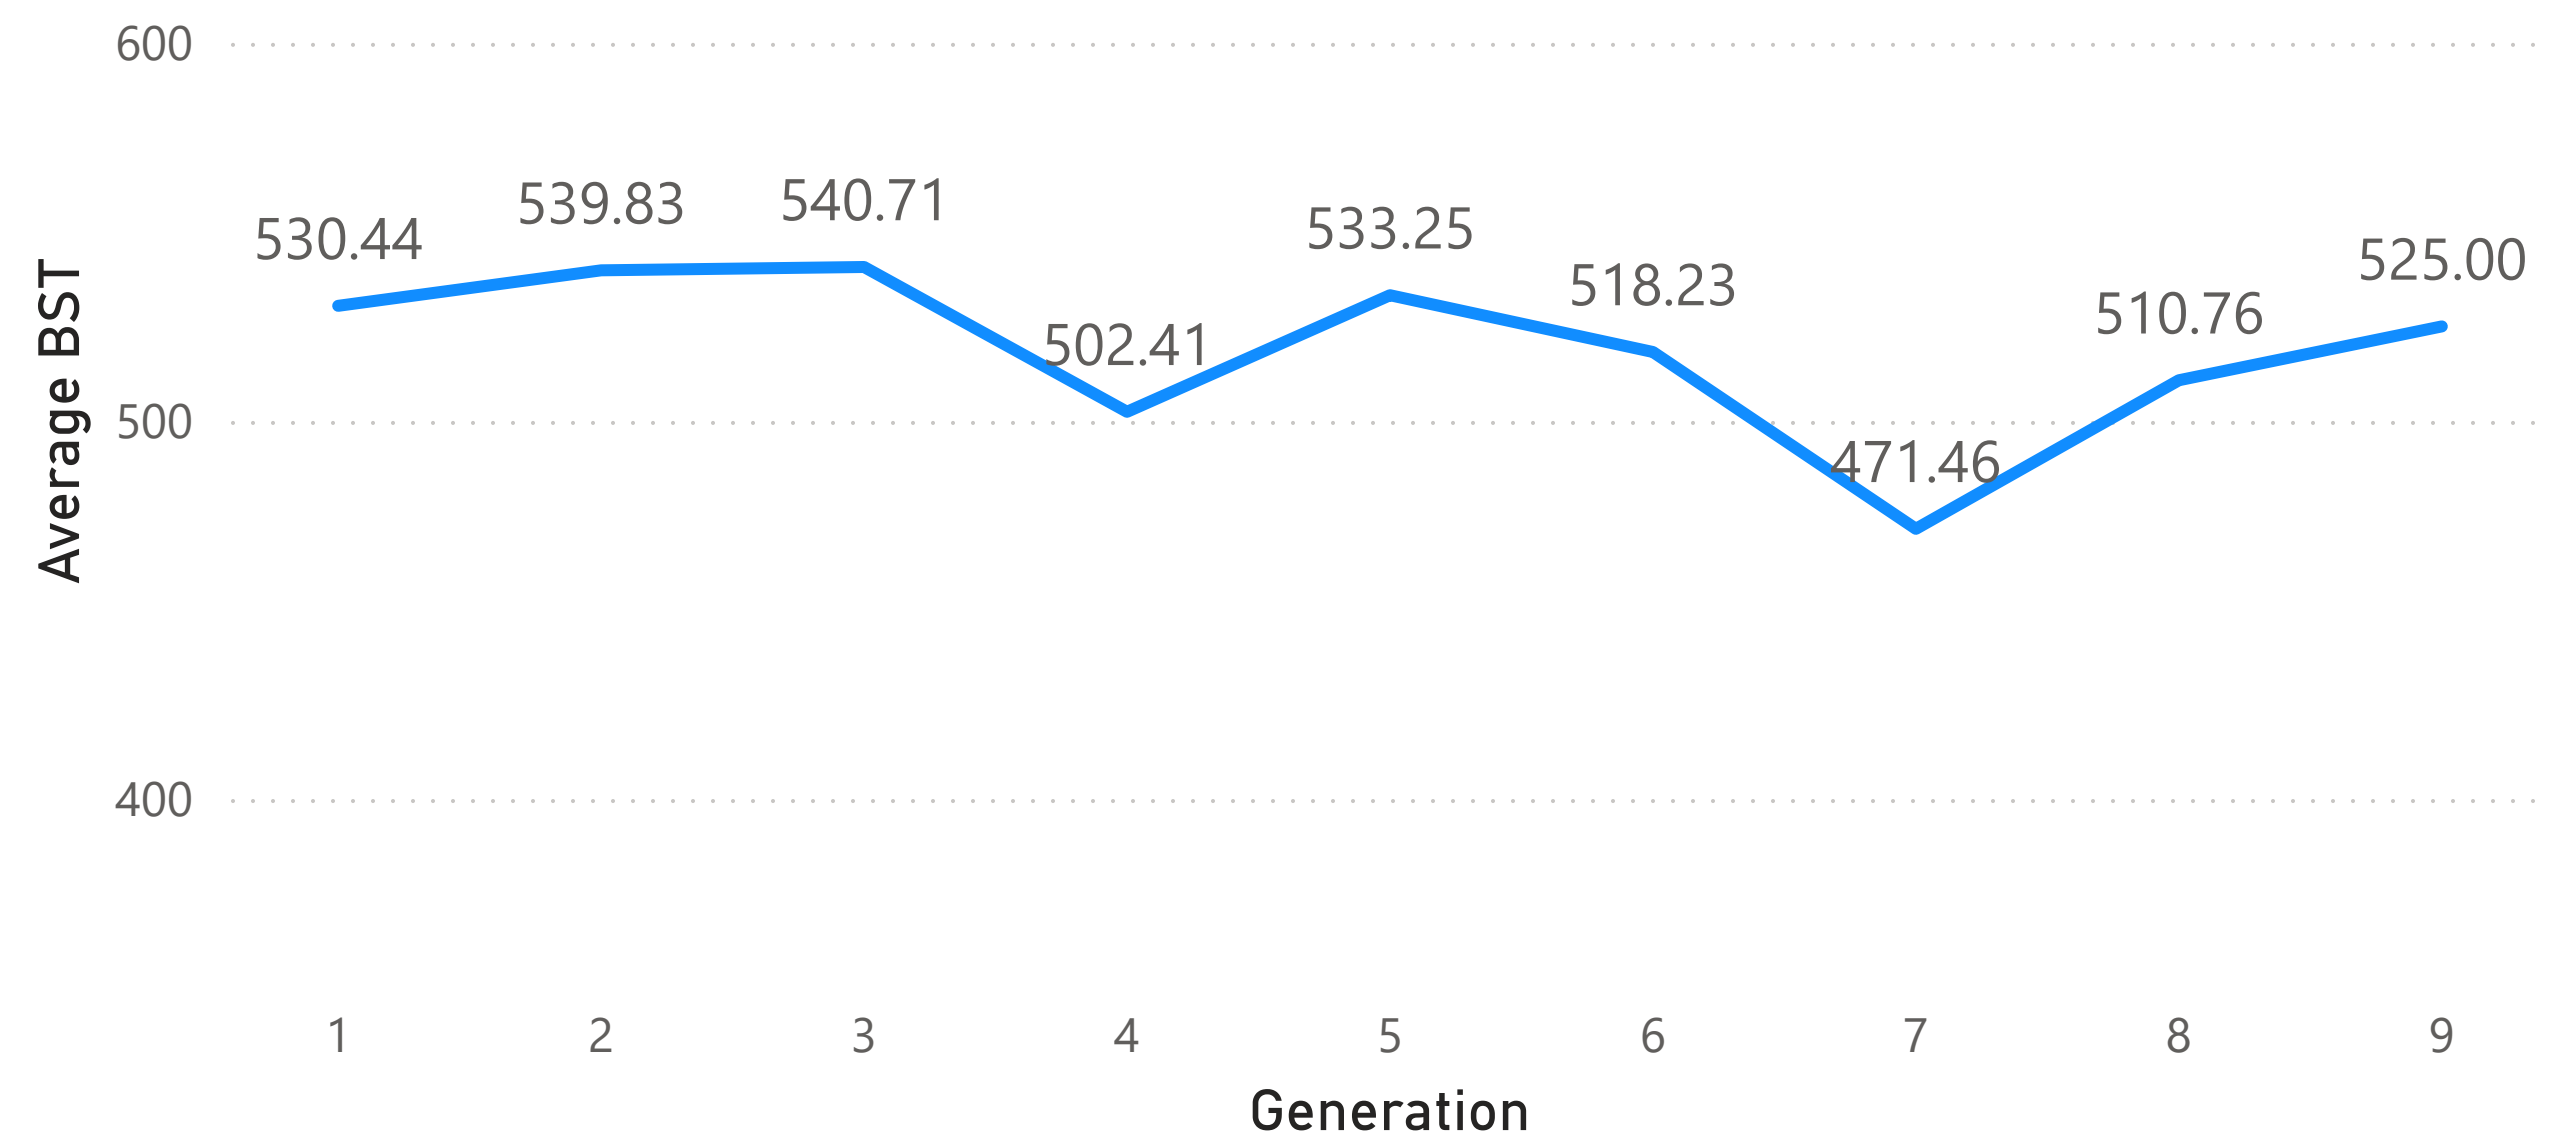

Average BST by Category

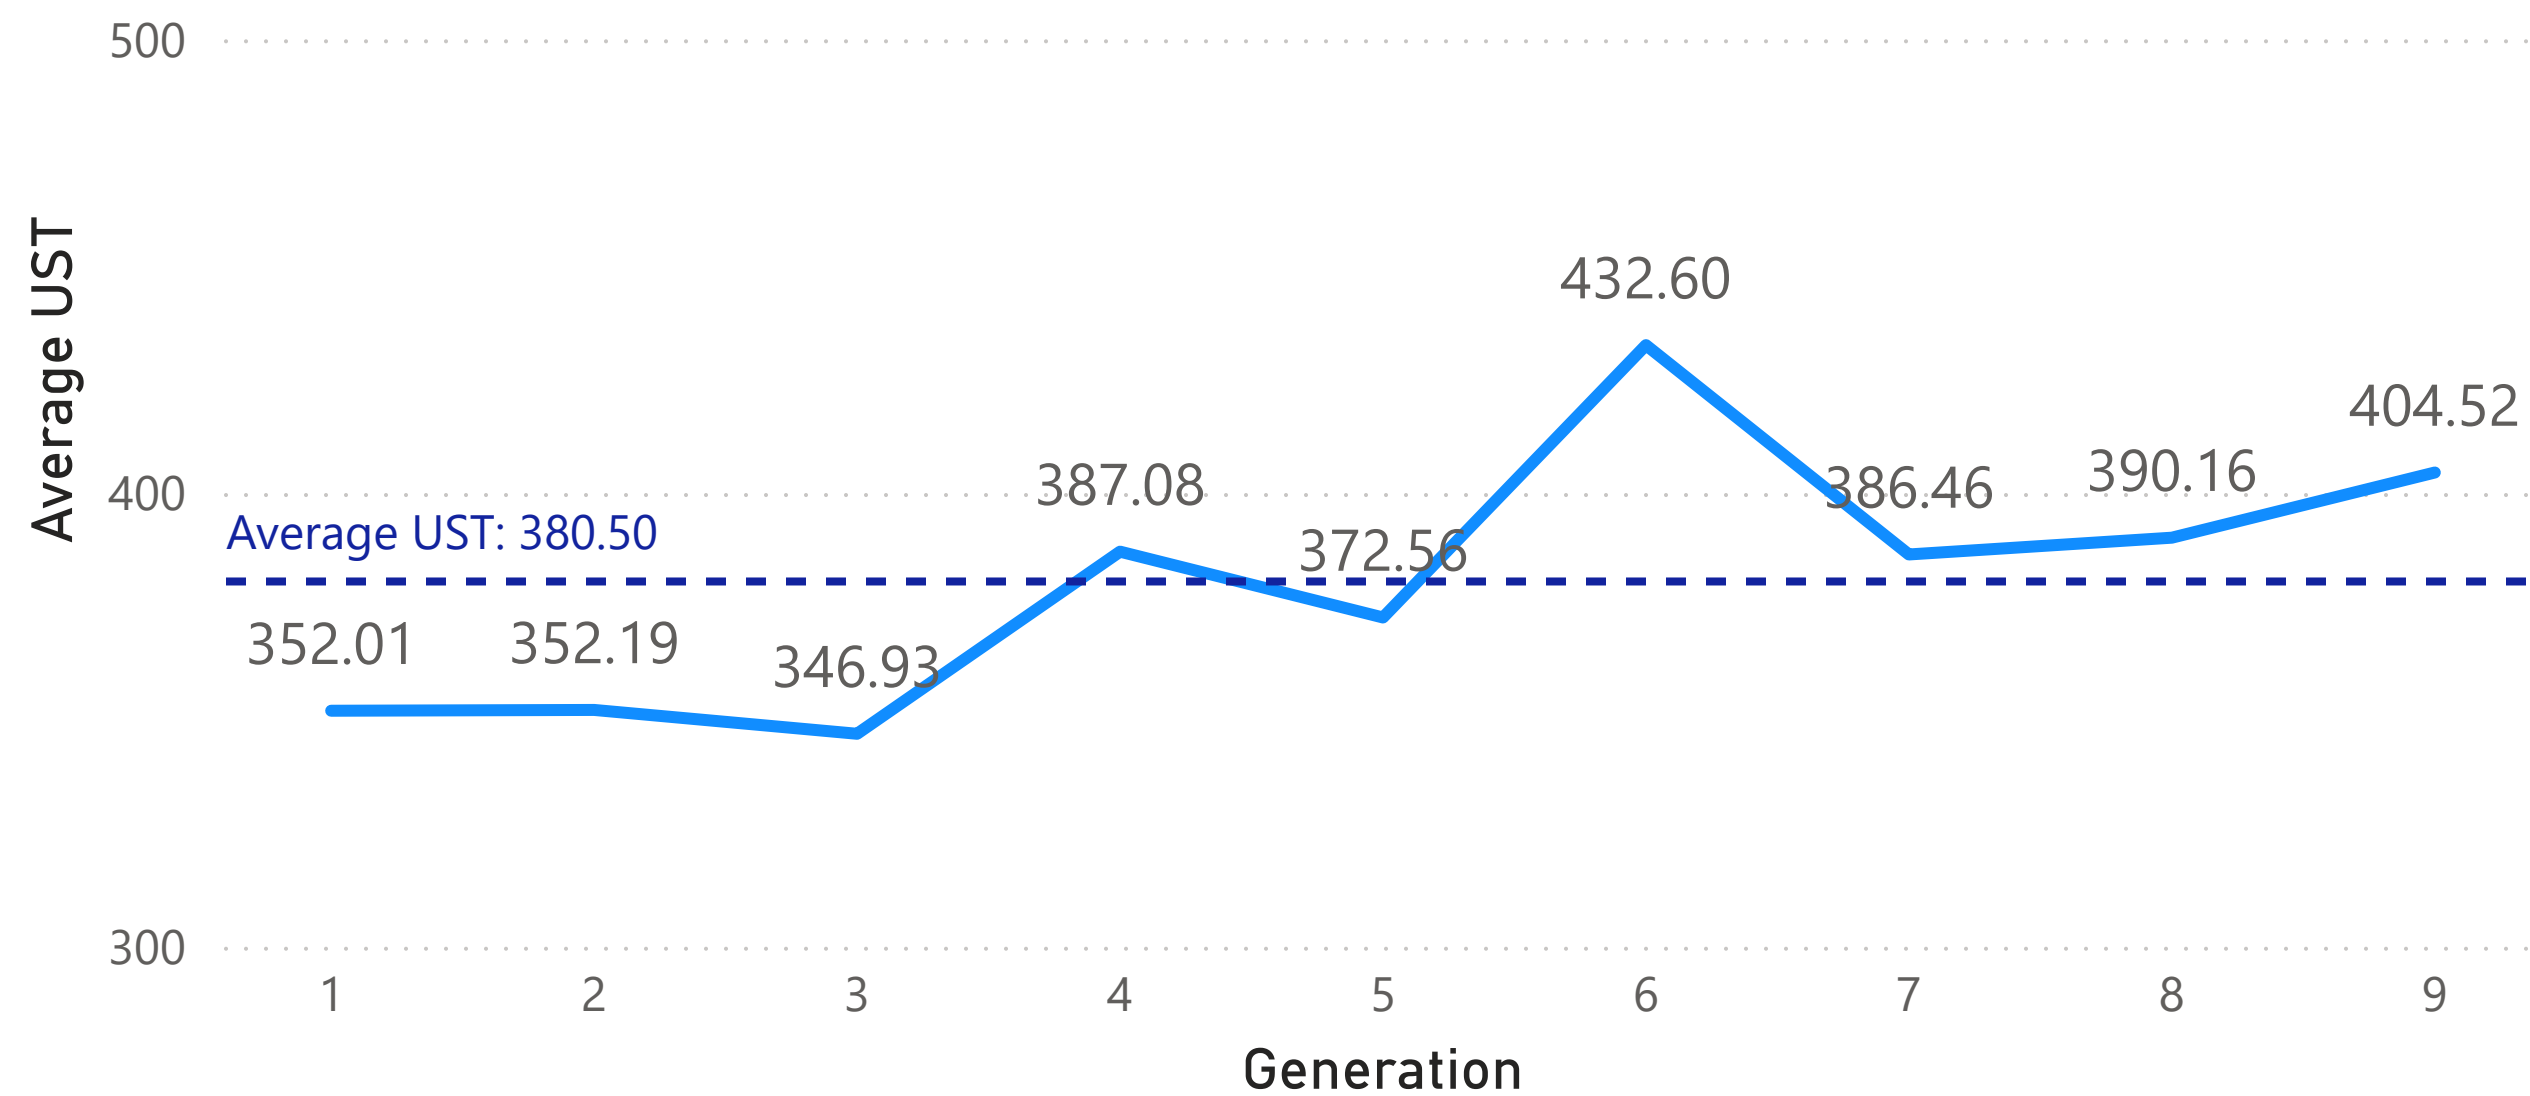

Pokemon category ● Legendaries, Megas & Mythicals ● Regular Pokemons

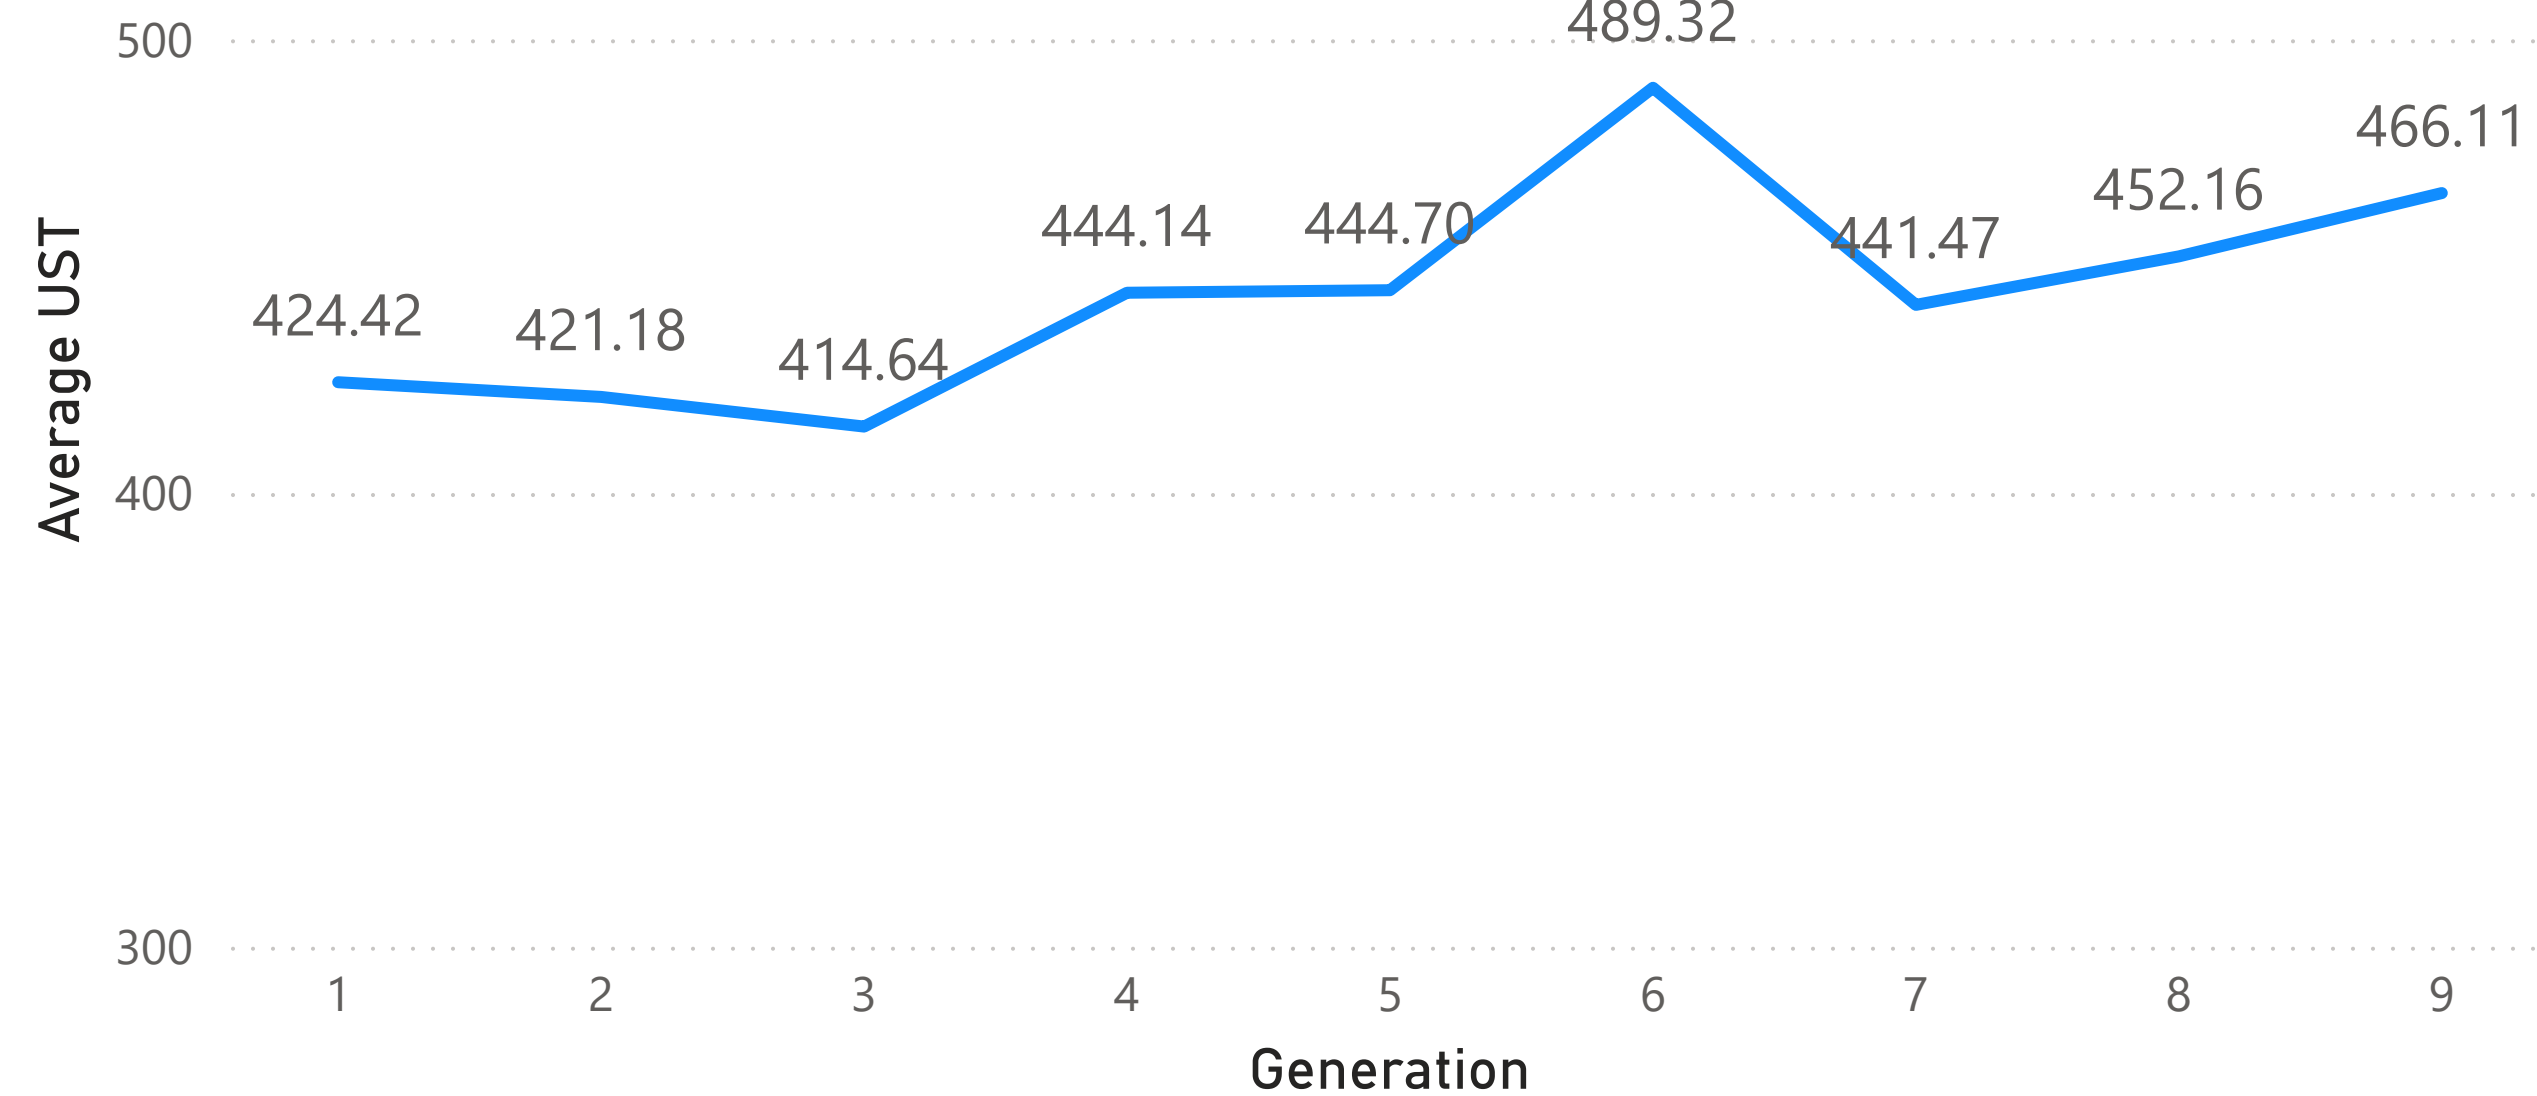

Average BST - fully evolved regular pokemons

Average UST by Generation

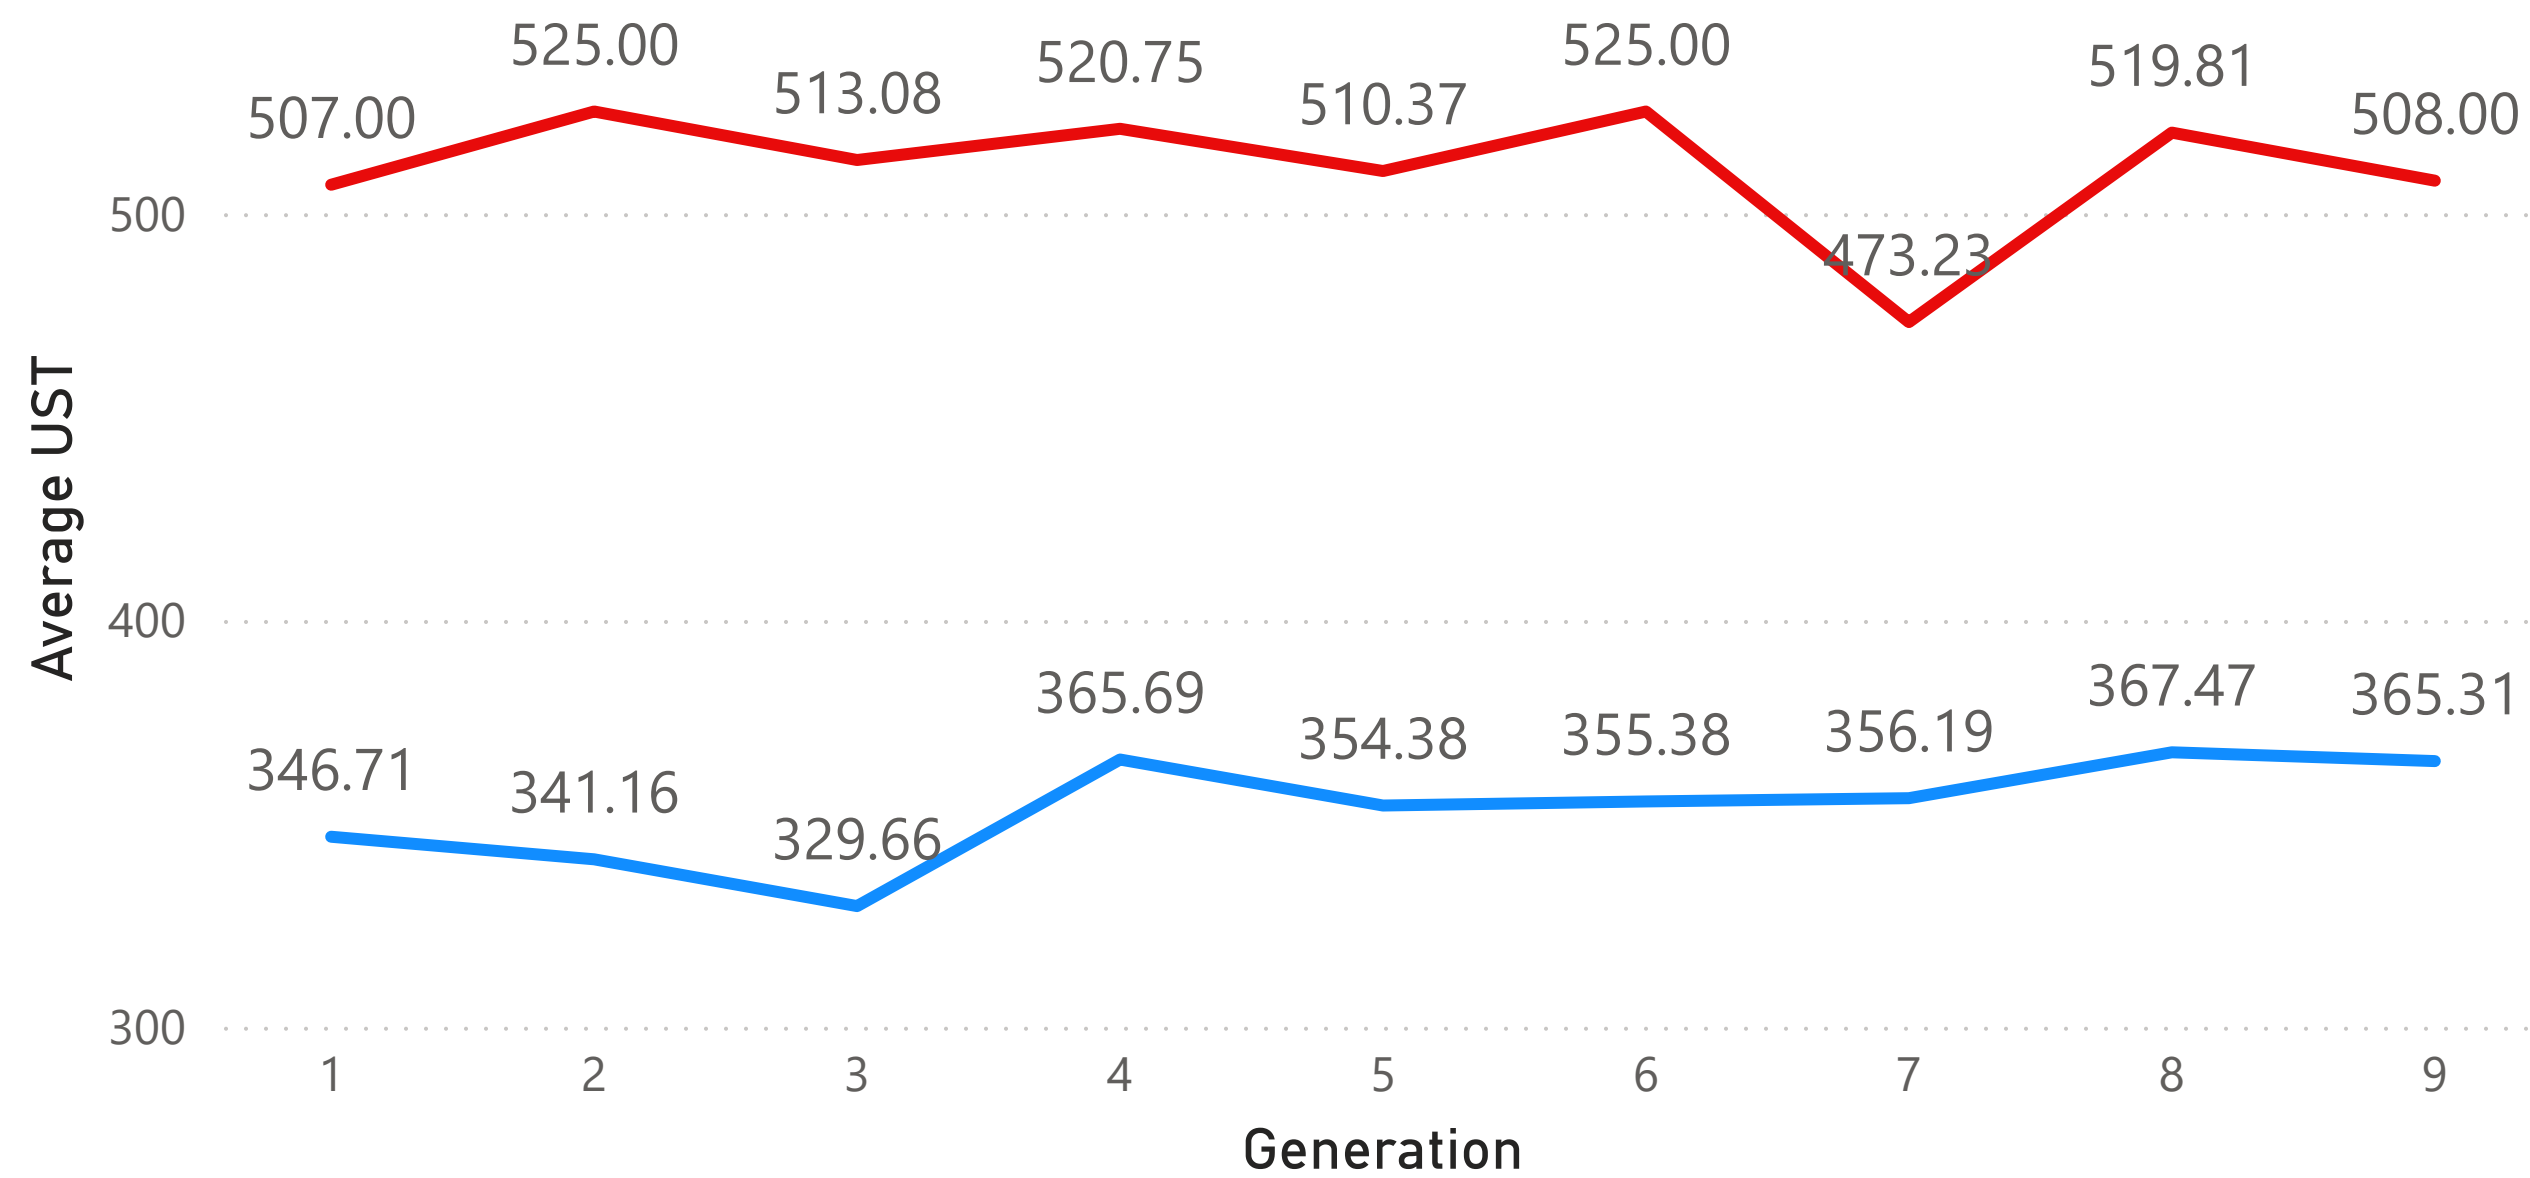

Average UST - fully evolved pokemons

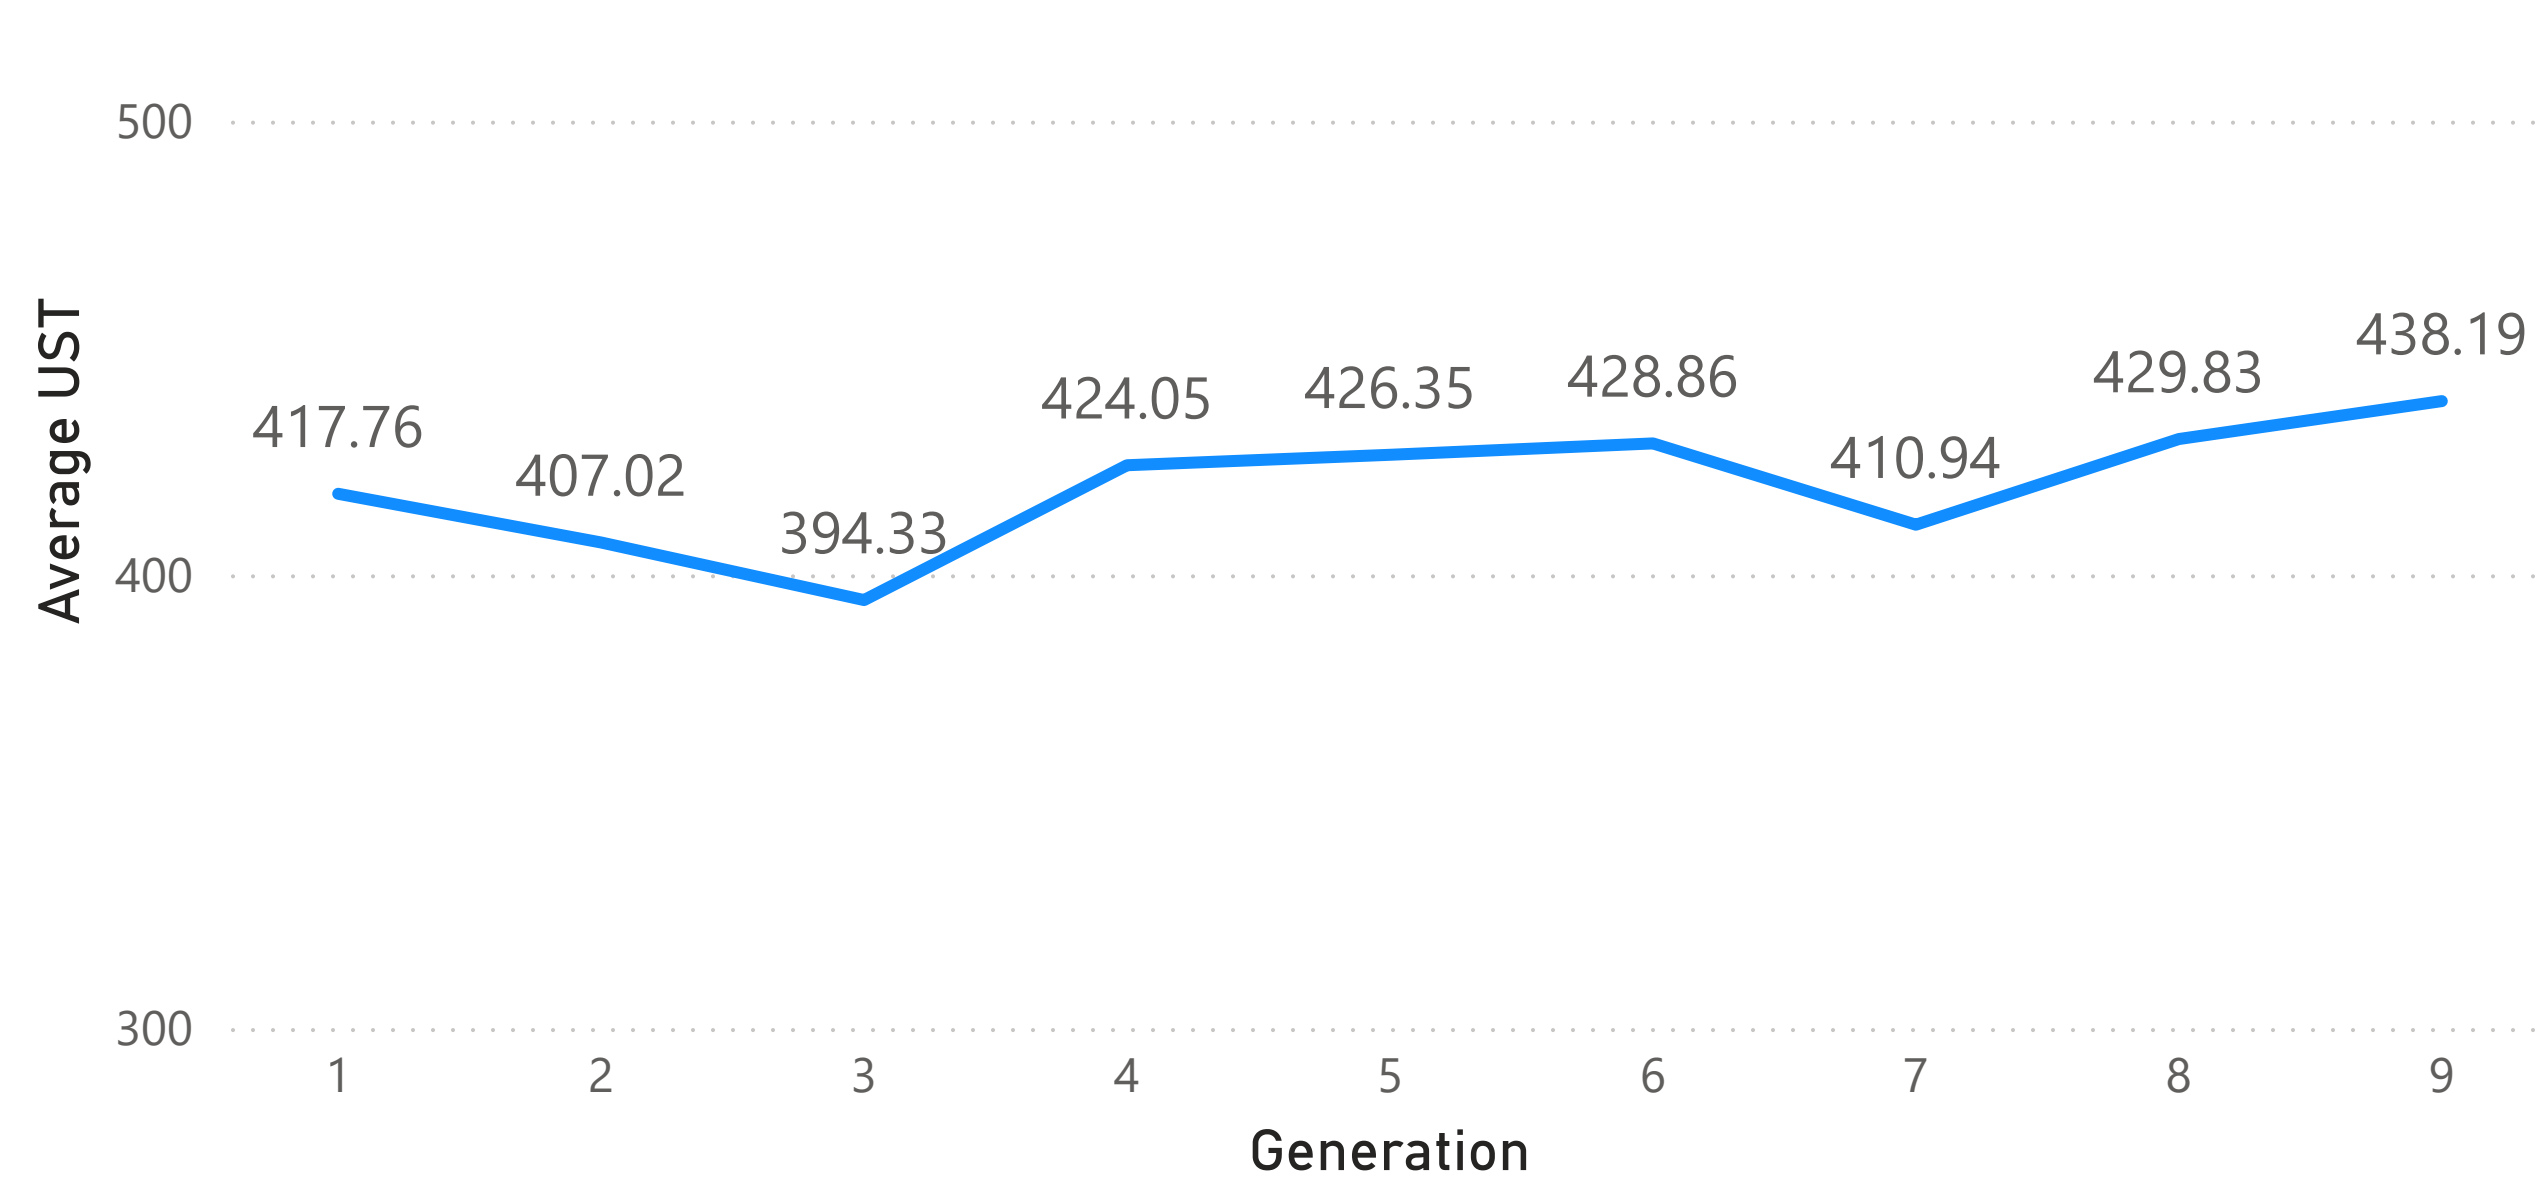

Average UST by Category

Pokemon category ● Legendaries, Megas & Mythicals ● Regular Pokemons

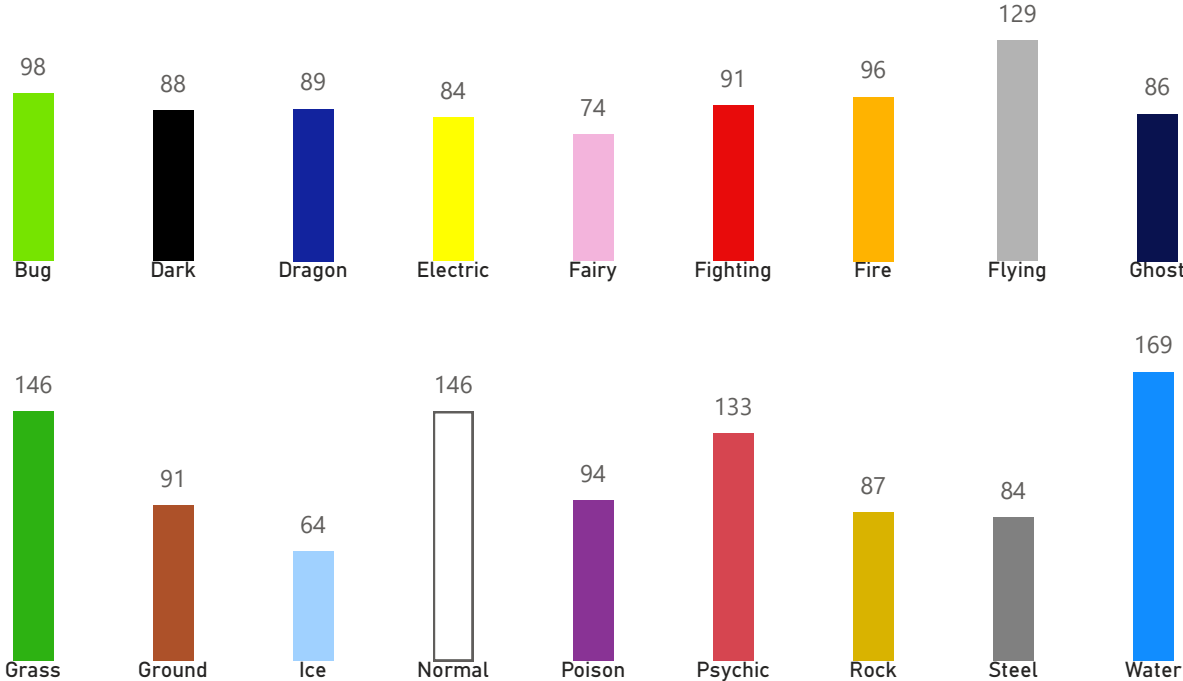

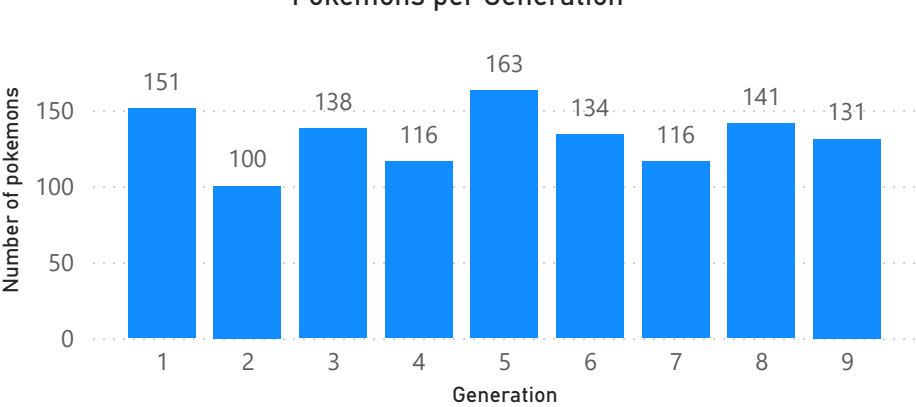

Average UST - fully evolved regular pokemons

Types Stats - select a type
